  "created": 1778766442,  
  "model": "openai/gpt-oss-120b",  
  "choices": [  
    {  
      "index": 0,  
      "message": {  
        "role": "assistant",  
        "content": "` ` ` java\nimport org.openqa.selenium.By;\nimport org.openqa.selenium.WebDriver;\nimport org.openqa.selenium.WebElement;\nimport org.openqa.selenium.chrome.ChromeDriver;\n\n\npublic class LeadForm {\n  public static void main(String[] args) {\n    // Set path to chromedriver if needed\n    // System.setProperty(\"webdriver.chrome.driver\", \"/path/to/chromedriver\");\n\n
```

```

WebDriver driver = new ChromeDriver();\n    driver.get("https://your-application-
url.com");\n\n    // Locate input fields using IDs (no numbers in the ID values)\n
WebElement companyNameInput =
driver.findElement(By.id("createLeadForm_companyName")); \n    WebElement
lastNameInput = driver.findElement(By.id("createLeadForm_lastName")); \n
WebElement firstNameInput =
driver.findElement(By.id("createLeadForm_firstName")); \n\n    // Locate the submit
button without using its numeric ID\n    WebElement createLeadButton =
driver.findElement(\n        By.cssSelector("input.smallSubmit[value='Create
Lead']")); \n\n    // Example actions (optional)\n
companyNameInput.sendKeys("Acme Corp"); \n    lastNameInput.sendKeys("Doe"); \n
firstNameInput.sendKeys("John"); \n    createLeadButton.click(); \n\n    // Cleanup\n
driver.quit(); \n } \n} \n` ``",

```

"reasoning": "We need to output Selenium Java code to extract the given DOM elements, presumably locate them and maybe interact? The user says \"Extract the below given DOM ... and provide me the selenium java code. Instructions: Do not use ID if the value has number in it. Provide only java code and no explanations needed\". So we need to locate elements without using ID if ID contains number. The IDs: createLeadForm_companyName (no number), createLeadForm_lastName (no number), createLeadForm_firstName (no number), ext-gen630 (has number). So for first three we can use ID, but for the submit button we must not use ID because it has number. So we can use other locators like By.cssSelector with class and value attribute. \n\nWe need to \"extract the below given DOM\". Likely they want to locate elements and maybe get their values? Provide code that finds them. Provide only Java code. \n\nWe'll write something like: \n\nWebDriver driver = new ChromeDriver();\ndriver.get(\"url\");\nWebElement companyName = driver.findElement(By.id(\"createLeadForm_companyName\"));\nWebElement lastName = driver.findElement(By.id(\"createLeadForm_lastName\"));\nWebElement firstName = driver.findElement(By.id(\"createLeadForm_firstName\"));\nWebElement createLeadBtn = driver.findElement(By.cssSelector(\"input.smallSubmit[value='Create Lead']\"));\n\nThen maybe get attributes or send keys. \n\nWe'll just provide code snippet. \n\nMake sure no explanation. Provide only code. Use imports. \n\nLet's produce final answer."

```

4. S03 -WebSearch-HW – this used model groq/compound-mini

Interestingly it users two models and integrates them with external tools like searching web and then getting results... in this specific case the output is just one line, however the reasoning part shows how it searched on various websites and then gave score to each one and the one with highest took the final output.

a) End point:
