1. Run the user story review flow via postman after exposing prompt_template field with as is prompt contents from given flow that I imported.

1.1. Making customizable parameter “prompt template” exposed for customization.

1.2. Postman request:

The image shows a Postman interface for a POST request. The URL is `http://127.0.0.1:7860/api/v1/run/custom_fields`. The request body is a JSON object with the following structure:

```
{
  "input_type": "text",
  "input_value": "hello world!",
  "tweaks": {
    "Prompt Template-ZLZiN": {
      "template": "For this given Input as user story : {userStory}, follow these;\n\nInstructions\n\nYou are an expert AI assistant specialized in Business Analysis for Healthcare.\nYour task is to analyze and review the uploaded user story document based on multiple quality dimensions and provide;\n\nIndividual parameter scores (each out of 20)\nOverall quality score (out of 100)\n\nSpecific improvement recommendations for each weak parameter\nEvaluate the user story against the following five parameters;\nClarity: Is the story easy to understand and unambiguous?\nCompleteness: Are acceptance criteria and preconditions well-defined?\nBusiness Value Alignment: Does it reflect tangible healthcare value (e."
    }
  }
}
```

The response is `200 OK` with a status of `OK`, a time of `4.33 s`, and a size of `18.59 KB`. The response body is `200 | 4.33 s`.

For the given Input as user story: {userStory}

Instructions

You are an expert AI assistant specializing in Healthcare Business Analysis.

Your task is to analyze and review the provided user story based on multiple quality dimensions and generate a structured assessment.

Deliverables:
1. Individual parameter scores (each out of 30)
2. Overall quality score (out of 150)
3. Detailed improvement recommendations for weak areas below 15
4. Overall rating and clear possible top 5 improvements

Evaluation Criteria:
1. Clarity
    * Is the story breaks down step by step to make it clear to understand, specific, and free from ambiguity?
2. Completeness
    * Are acceptance criteria, business rules, assumptions, and preconditions clearly defined ?
3. Business Value Alignment
    * Does the story deliver meaningful healthcare value such as patient safety, regulatory compliance, clinical effectiveness, or operational efficiency?
4. Testability
    * Can QA engineers easily derive positive, negative, and edge test scenarios from the story? Does it have enough coverage of what is expected in case of each of the aspects about scenarios.
5. Technical Feasibility
    * Is the solution realistically implementable within standard healthcare technology environments and constraints ?
6. Granularity of the story
    * Is it very coarse level and needs to be broken down ?

Context

The user story belongs to the Healthcare domain, specifically involving:
* Hospital Information Systems (HIS)
* Electronic Health Records (EHR)
* Patient Records Management
* Clinical Workflow Automation
* Healthcare Compliance and Regulations (HIPAA, HIT, FHIR, etc.)

length: 4,426  lines: 140  Ln: 13  Col: 62  Pos: 450  Windows (CR LF)  UTF-8  INS  6:58:37 PM
```

```
57 The objective is to ensure that user stories are:
58 * Well-structured
59 * Complete
60 * Testable
61 * Technically feasible
62 * Regulatory compliant
63 * Aligned with healthcare business objectives
64 * Granular level
65
66 ● Output Requirements
67 Generate the response in HTML format only.
68
69 The HTML output must contain the following sections:
70
71 1. User Story Review Title
72 2. Parameter Scores Table
73 3. Overall Quality Score Section
74 4. Improvement Recommendations Section
75 5. Actionable Improvements Section
76 6. Conclusion Section
77
78 Scoring Guidelines
79 Provide a score out of 30 for each parameter and calculate the overall score out of 150.
80
81 ● Example:
82 User Story:
83 "As a doctor, I want to review and approve patient prescriptions digitally before they reach the pharmacy, ensuring safety and compliance."
84
85 Expected Evaluation:
86
87 * Clarity: 6/30
88 * Completeness: 6/30
89 * Business Value Alignment: 20/30
90 * Testability: 20/30
91 * Technical Feasibility: 20/30
92
93 Overall Score: 66/150
94
95 Improvement Areas:
96
97 * Add explicit acceptance criteria for prescription error handling.
98 * Define validation rules for dosage verification and duplicate medications.
99 * Include workflow actor details and approval responsibilities.
100 * Specify integration requirements with EHR systems.
101 * Define compliance and audit-trail expectations.
102
length: 4,426  lines: 140  Ln: 13  Col: 62  Pos: 450  Windows (CR LF)  UTF-8
```

1.5. Output review (with changed requested scale for example):

```
1 <!DOCTYPE html>
2 <html lang="en">
3 <head>
4 <meta charset="UTF-8">
5 <title>User Story Review</title>
6 <style>
7   body { font-family: Arial, sans-serif; line-height: 1.6; color: #333; max-width: 800px; margin: 20px auto; padding: 20px; }
8   h1 { color: #0056b3; border-bottom: 2px solid #0056b3; padding-bottom: 5px; font-size: 24px; }
9   h2 { color: #333; font-size: 18px; margin-top: 20px; }
10  table { width: 100%; border-collapse: collapse; margin: 15px 0; }
11  th, td { border: 1px solid #ccc; padding: 10px; text-align: left; }
12  th { background-color: #f2f2f2; }
13  ul, ol { padding-left: 20px; }
14  li { margin-bottom: 8px; }
15  .score-box { background-color: #f8f9fa; border-left: 5px solid #0056b3; padding: 15px; margin: 15px 0; font-weight: bold; font-size: 16px; }
16  .warning { color: #c0392b; font-weight: bold; }
17 </style>
18 </head>
19 <body>

Consultant Dashboard My Inpatients User Story Review

Parameter Scores Table

Parameter	Score (out of 30)
Clarity	18/30

Parameter	Score (out of 30)
Completeness	12/30 (Below 15)
Business Value Alignment	15/30
Testability	18/30
Technical Feasibility	20/30
Granularity of the story	7/30 (Below 15)

Overall Quality Score Section

The overall quality score for this user story is 90/150.

While the story has some strengths, there are areas that need improvement to make it more comprehensive and testable.

Improvement Recommendations Section

Based on the evaluation criteria, the following areas need improvement:

- **Clarity:** The story lacks specific details about the consultant dashboard and its functionality. It would be beneficial to break down the story into smaller, more manageable tasks.
- **Completeness:** The acceptance criteria are incomplete, and there is no mention of business rules, assumptions, or preconditions. It is essential to define these aspects to ensure a clear understanding of the requirements.
- **Business Value Alignment:** The story does not explicitly mention how the consultant dashboard will improve patient safety, regulatory compliance, clinical effectiveness, or operational efficiency. It would be beneficial to add specific business value statements to the story.
- **Granularity of the story:** The story is too coarse and needs to be broken down into smaller, more manageable tasks.

Actionable Improvements Section

To improve the quality of this user story, consider the following actionable improvements:

1. **Add explicit acceptance criteria:** Define specific acceptance criteria for the consultant dashboard, including data visualization, user interface, and performance requirements.
2. **Define business rules and assumptions:** Identify and document business rules, assumptions, and preconditions that will guide the development of the consultant dashboard.
3. **Specify business value alignment:** Add specific business value statements to the story, explaining how the consultant dashboard will improve patient safety, regulatory compliance, clinical effectiveness, or operational efficiency.
4. **Break down the story into smaller tasks:** Divide the story into smaller, more manageable tasks to improve clarity and testability.
5. **Define integration requirements:** Specify integration requirements with EHR systems and other relevant healthcare systems.

Conclusion Section

In conclusion, while the Consultant Dashboard My Inpatients user story has some strengths, it requires improvement in several areas to ensure clarity, completeness, testability, and business value alignment. By addressing these areas, the story can be made more comprehensive and actionable, ultimately leading to a higher-quality product that meets the needs of healthcare stakeholders.

3. Exploration task for different IDE's as discussed in our classroom session (since copilot even a free version has started with daily and weekly usage limit)

Recently started seeing mention of Local LLM setups via ollama and possibility of using local LLMs from IDE like vscode via some extension. But could not make it work.

Thought of checking if this practically at all in some limited way to use for code completions like we get for github copilot. May very less powerful but still works for simpler code generations ?
